Pro J2EE 1.4: From Professional to Expert Sue Spielman, Meeraj Kunnumpurath, 2004-06-28 This chapter has covered a lot of ground After reading it you should have a thorough understanding of the new features available in the JSP 2.0 specification We covered what you need to know to write your own custom actions regardless of which implementation you choose Custom actions are useful for creating reusable JSP components New in the JSP 2.0 specification are the notions of tag files and JSP fragments These are simple ways to create custom actions without having to know how to write Java They provide a mechanism for page authors to create their own custom tag libraries without the worry of having to write complicated Java code Using tag files provides a mechanism for eliminating

writing TLD files since the JSP container generates implicit TLD files for them There is also a flexible mechanism in place for packaging and deploying tag libraries in JSP 2.0 It is also possible to write classic actions using the various interfaces available These include the following Tag BodyTag IterationTag Another feature introduced in this chapter was the new JSP 2.0 Simple Tag interface which has a much simpler life cycle defined than the classic tag interfaces Simple Tag allows for all of the power of cooperating and iteration tags with less hassle in the coding Other new features include using dynamic attributes in actions that allow tag handlers to accept attributes that haven't been declared in a TLD
