Understanding Programming Scott R. Cannon, 2002-11-07 This text is focused on teaching Java as a first language using two principles First students learn best when they see and appreciate an immediate need Second students learn best by doing and experiencing In the first few chapters the book starts with a breadth first approach Students learn one way to do I O one variable type one way to do a condition and one loop statement Quickly students begin coding useful and interesting programs with this subset of Java Taking a spiral approach the author introduces a concept or method in simplified form and gradually as the need for more capability is demonstrated expands upon it until the full concept is presented Chapters are teaching units not topic units and the text avoids teaching mechanisms and concepts that allow errors students are not yet ready to understand Students gain confidence and are excited to learn more as the course progresses

An Introduction to Programming and Object-Oriented Design Using Java Jaime Niño, Frederick A. Hosch, 2004-10-28. Nino and Hosch have updated their popular introductory text that provides an object's first introduction to programming and software design using Java. The emphasis throughout is on problem modeling using fundamental software engineering principles and concepts. Java used as a vehicle for teaching these topics. New constructs and features of Java 5.0 such as generics are introduced. The text includes optional interactive exercises using the DrJava integrated development environment IDE. The UML is employed very informally for denoting objects, object relationships and system dynamics. No specific previous programming experience is assumed and the text is appropriate for first year computer science majors. The text could also carry over to a second course on data structures or software OO design.

About DrJava. DrJava is an IDE designed primarily for students and includes an easy to use facility for interactively evaluating Java code. Optional DrJava exercises are included throughout the text if instructors want their students doing more programming.
