Greener Marketing Martin Charter,Michael Jay Polonsky,2017-09-29 Building on the strengths of the material published in the hugely successful first edition of *Greener Marketing* this important new title examines on a global scale the progress of environmental marketing in the 1990s and considers how social issues are increasingly becoming critical factors in how corporations meet the ever growing demands and expectations of customers Despite the fact that such issues are increasingly important in marketing activities around the world it is difficult for practitioners to keep up to date with complex and rapidly changing information and ideas The purpose of this book is to provide practitioners and academics with best practice examples and actionable recommendations on how to implement and appraise green marketing activities It will provide information and ideas for those involved in marketing on how to incorporate environmental and social considerations as well as providing new perspectives on marketing for environmental managers To achieve a comprehensive viewpoint the book is split into three sections The first sets out the strategic issues and rationale for green marketing the second addresses tactical issues in more detail and the third provides detailed international case studies Topics addressed by the global set of contributors include the growing area of products versus services environmental product development green marketing alliances environmental communications green consumers eco tourism and environmental marketing in developing countries *reener Marketing* is not only a sequel to the successful first volume but redefines global progress towards the successful marketing of greener products and services **Managing the Business Case for Sustainability** Stefan Schaltegger,Marcus Wagner,2017-09-08 The difficulties in moving towards corporate sustainability raise the question of how environmental and social management can be integrated better with economic business goals Over the last decade the relationship between environmental and economic performance and more recently the interaction between sustainability

performance and business competitiveness have received considerable attention in both theory and practice. However to date only partial aspects of the relationship between sustainability performance, competitiveness and economic performance have been studied from a theoretical as well as an empirical perspective. And to date no unique relationship has prevailed in empirical studies. A number of explanations have been put forward to explain this including methodological reasons such as the lack of statistical data, the low quality of that data or the fact that such data is often available for short time periods only. Other theoretical explanations have been developed such as the influence of different corporate strategies or the relatively small influence of environmental or sustainability issues as one factor among many on the economic or financial success of firms. So how should the business case for sustainability be managed? This is the starting point for this book which compiles insights on a large number of aspects of the link between sustainability performance, business competitiveness and economic success in an attempt to provide a comprehensive and structured view of this relationship. The book provides an unrivalled body of knowledge on the state of theory and practice in this field and identifies prospective future fields of work. The book includes conceptual frameworks for the interaction of social, environmental and economic issues in business environments; case studies of companies that have successfully integrated social, environmental and economic issues; analyses of the causal and empirical relationship between environmental and or social performance, business performance and firm level competitiveness; concepts and tools useful for improving business value with proactive operational strategies; assessment of the factors influencing operational sustainability strategies and their economic impact; and comparisons of interactions between sustainability performance and firm competitiveness across industry sectors and countries.

Managing the Business Case for Sustainability is the definitive work in its field, the most comprehensive book yet published on the theory and practice of managing sustainability performance, competitiveness, environmental, social and economic performance in an integrated way. It will be essential reading for managers, academics, consultants, fund managers, governments and government agencies, NGOs and international bodies who need a broad and comprehensive overview of the business case for sustainability.

The Financial Times Handbook of Management Stuart Crainer, 1995. The most ambitious comprehensive and authoritative management solution ever published, it brings together the latest management thinking from the best in the world.

Accounting for the Environment Rob Gray, Jan Bebbington, 2001-07-25. This book is a good comprehensive text and comes highly recommended to anyone currently involved in looking to get involved in or just interested in environmental management, environmental accounting and reporting. *Pacific Accounting Review*. This is the long awaited 2nd edition of the benchmark publication that helped shape the developing agenda of environmental accounting. This excellent new edition provides an overview of the subject ranging from environmental management to sustainability and integrates the major advancements that have occurred since the first edition in both research and practice. It introduces and explains environmental issues as they relate to accountants today. This new work also places an increased emphasis on the

emerging research literature in the field and reveals a consciousness of the difficulties of developing an environmental agenda in business. It makes an excellent stand alone text for lower level students a firm base from which the advanced student or researcher can explore research and more complex issues and a useful guide for practitioners seeking to understand and implement environmental practice
