Software Process Modelling and Technology Anthony Finkelstein, Jeff Kramer, Bashar Nuseibeh, 1994-10-11 Prominent contributors identify key research problems that shed light on convincing treatments of several fundamental concerns which have characterized the field to date After introducing process centred environments the text proposes a conceptual framework for describing and evaluating evolving software processes Discusses 10 projects the authors are involved with such as EPOS MERLIN ALF ADELE TEMPO SPADE and PADM Concludes with an assessment exercise which compares and appraises these projects *Software Process Technology* Carlo Montangero, 1996-09-25 Content Description Includes bibliographical references and index

Kaba, David Wastell, 2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the

technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title Software Process Modelling and Technology Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners

Process Modelling Bernd Scholz-Reiter,Hans-Dietrich Stahlmann,Arnim Nethe,2012-12-06 A process model is very often used for system analysis design and management in various application areas Using a process model has the advantage that it has only to be as precise as necessary within the parameters of the individual field of application whereas the precision externally is less important This makes process modeling easier and open for structuring The contributions deal with different approaches to process modelling especially in the areas of business process modelling logistics and production processes and water systems

Software Process Modeling Silvia T. Acuna,Natalia Juristo,2005-03-10 This book brings together experts to discuss relevant results in software process modeling and expresses their personal view of this field It is designed for a professional audience of researchers and practitioners in industry and graduate level students

Information Modelling and Knowledge Bases XVI Yasushi Kiyoki,Y. Kiyoki,Benkt Wangler,Hannu Jaakkola,Hannu Kangassalo,2005 Modelling of information is necessary in developing information systems Information is acquired from many sources by using various methods and tools It must be recognized conceptualized and conceptually organized efficiently so that users can easily understand and use it Modelling is needed to understand explain organize predict and reason on information It also helps to master the role and functions of components of information systems Modelling can be performed with many different purposes in mind at different levels and by using different notions and different background theories It can be made by emphasizing users conceptual understanding of information on a domain level on an algorithmic level or on representation levels On each level the objects and structures used on them are different and different rules govern the behavior on them Therefore the notions rules theories languages and methods for modelling on different levels are also different It will be useful if we can develop theories and methodologies for modelling to be used in different situations because databases knowledge bases and repositories in knowledge management systems developed on the basis of models and used to technically store information are growing day by day In this publication the interest is focused on modelling of information and one of the central topics is modelling of time Scientific and technical papers of high quality are brought together in this book

Bologna, G. Bucci, 2013-11-11 Software quality is a generalised statement difficult to agree or disagree with until a precise definition of the concept of Software Quality is reached in terms of measurable quantities Unfortunately for the software technology the basic question of what to measure how to measure when to measure how to deal with the data obtained are still unanswered and are also closely dependant on the field of application In the past twenty years or more there have been a number of conferences and debates focusing on the concept of Software Quality which produced no real industrial impact Recently however the implementation of a few

generic standards ISO 9000 IEEE etc has produced and improved application of good practice principles at the industrial level As a graduate in PhYSiCS I still believe it is a long way before the concept of Software Quality can be defined exactly and measured if ever This is way I think the AQuIS series of conferences is important its object begin to provide a platform for the transfer of technology and know how between Academic Industrial and Research Institutions in the field of Software Quality Their objects are to provide a forum for the introduction and discussion of new research breakthroughs in Software Quality to provide professional Software Quality engineers with the necessary exposure to the results of current research to expose the research community to the problems of practical application of new results *Proceedings* ,2003 *Software Engineering Environments, 1995* Malcolm S.
