The Uncertain Nervous System:

The Uncertain Nervous System Benedict Delisle Burns, 1968 **Sensory Coding in the mammalian nervous system**
George Somjen, 2013-04-09 Great advances have been made in the area of sensory physiology during the last few decades and these developments seem to be asking for a comprehensive review that is manageable in size and cohesive in content This volume has been written with that goal in mind In the first place I would like to thank Mr R van Frank of Appleton Century Crofts for asking me to do the job and my wife for persuading me to do it for writing it was an enjoyable task Much of the discussion of factual data set to print here evolved in question and answer sessions in courses given to students in physiology psychology and medicine and to physicians training in neurology neurosurgery and psychiatry Besides my students I had in mind while preparing this text my professional colleagues laboring on their lecture notes under circumstances perhaps not unlike my own The material is divided in two parts The first deals with the manner of representation of sensory information in peripheral nerves the so called first order code The second half of the text deals with the handling of sense data by the central nervous system One reason for dividing the material in this way is that many of the features of the first order code are common to all sensory modalities The intensity the place the rhythm the quality of stimuli are encoded by rules which are applicable albeit with appropriate modifications to all senses Furthermore these rules of coding are today rather well understood Decisions, Uncertainty, and the Brain Paul W. Glimcher, 2004-09-17 In this provocative book Paul Glimcher argues that economic theory may provide an alternative to the classical Cartesian model of the brain and behavior Glimcher argues that Cartesian dualism operates from the false premise that the reflex is able to describe behavior in the real world that animals inhabit A mathematically rich cognitive theory he claims could solve the most difficult problems that any environment could present eliminating the need for dualism by eliminating the need for a reflex theory Such a mathematically rigorous description of the neural processes that connect sensation and action he explains will have its roots in microeconomic theory Economic theory allows physiologists to define both the optimal course of action that an animal might select and a mathematical route by which that optimal solution can be derived Glimcher outlines what an economics based cognitive model might look like and how one would begin to test it empirically Along the way he presents a fascinating history of neuroscience He also discusses related questions about determinism free will and the stochastic nature of complex behavior The Central Nervous System of Vertebrates, Vol. 5/II H. Kuhlenbeck, 1978-02-21 In 1927 Hartwig Kuhlenbeck published a series of lectures on the central nervous system of vertebrates and gave neurobiology its standard reference for decades The present work now complete in 5 volumes represents a monumental expansion of the early lectures *The Central Nervous System of Vertebrates* Hartwig Kuhlenbeck, 1978 In 1927 Hartwig Kuhlenbeck published a series of lectures on the central nervous system of vertebrates and gave neurobiology its standard reference for decades The present work now complete in 5 volumes represents a monumental expansion of the early lectures **The Vegetative Nervous System**
