Shape Casting Processing Minerals, Metals and Materials Society. Annual Meeting,2006-11 This book reviews the latest developments and applications of modeling and simulation techniques in aluminum shape castings and the need for improvement of these computational techniques Specifically topics include design of both the cast aluminum alloy as well as aluminum casting and gating system modeling simulation and optimization of both the casting process and heat treatment modeling and simulation of both casting defect and microstructure prediction of mechanical performance and influence of subsequent processing on final performance Developers and users of computational techniques applied to aluminum shape castings as well as end users of castings will find this book extremely helpful **Multi-Scale Modelling of Composite**

Material Systems Costas Soutis,P W R Beaumont,2005-08-29 This important book focuses on the fundamental understanding of composite materials at the microscopic scale from designing micro structural features to the predictive equations of the functional behaviour of the structure for a specific end application The papers presented discuss stress and temperature related behavioural phenomena based on knowledge of physics of microstructure and microstructural change over time **Characterization and Modeling to Control Sintered Ceramic Microstructures and Properties** American Ceramic Society. Meeting,2005-05 These proceedings are designed to provide a forum that integrates research in characterization and modeling to advance the science of ceramic composite sintering Densification shape deformation and microstructure evolution during sintering is addressed **Stochastic Multiscale Modeling of Polycrystalline Materials**

Bin Wen,2013 Mechanical properties of engineering materials are sensitive to the underlying random microstructure Quantification of mechanical property variability induced by microstructure variation is essential for the prediction of extreme properties and microstructure sensitive design of materials Recent advances in high throughput characterization of polycrystalline microstructures have resulted in huge data sets of microstructural descriptors and image snapshots To utilize these large scale experimental data for computing the resulting variability of macroscopic properties appropriate mathematical representation of microstructures is needed By exploring the space containing all admissible microstructures

that are statistically similar to the available data one can estimate the distribution envelope of possible properties by employing efficient stochastic simulation methodologies along with robust physics based deterministic simulators The focus of this thesis is on the construction of lowdimensional representations of random microstructures and the development of efficient physics based simulators for polycrystalline materials By adopting appropriate stochastic methods such as Monte Carlo and Adaptive Sparse Grid Collocation methods the variability of microstructure sensitive properties of polycrystalline materials is investigated The primary outcomes of this thesis include Development of data driven reduced order representations of microstructure variations to construct the admissible space of random polycrystalline microstructures Development of accurate and efficient physics based simulators for the estimation of material properties based on mesoscale microstructures Investigating property variability of polycrystalline materials using efficient stochastic simulation methods in combination with the above two developments The uncertainty quantification framework developed in this work integrates information science and materials science and provides a new outlook to multiscale materials modeling accounting for microstructure and process uncertainties Predictive materials modeling will accelerate the development of new materials and processes for critical applications in industry
