The Weaponizing of Biology Marc E. Vargo, 2017-10-18 Focusing on three forms of biological threat bioterrorism biocrime and biohacking the author examines the history of biowarfare and terrorism Groups drawn to biological aggression are discussed along with the array of viruses bacteria and toxins they might use in their attacks The phenomenon of biocrime biological aggression targeting individuals for personal rather than ideological

reasons is explored along with the growing trend of biohacking Part II presents case studies of bioterrorism and biocrime from the United States and Japan *Biohackers Magazine Issue 16* Biohackers , Progress It s a word with meanings of advancement improvement and a clear change towards a goal or objective From the moment humans have inhabited this Earth our whole existence as a species has experienced Progress as well as Decay Civilizations had flourished and progressed for many years and then decayed slowly and rotted over time until there was little to nothing left What is left however are usually things that we following civilizations have studied and learned from The remnants of civilizations are usually the teachings technologies and tools that outlast them History does love to repeat itself and leave the following generations wondering what their marks on the world and human progress will be Going beyond the terminology and historical examples one can ask some more insightful profound questions The first is why is there progress or decay in the first place There is of course no clear answer to this but I suppose it can be best summed up with the phrase First there is time And then there is what you do with it By that I mean that there is a natural order to the way things are and that to accept that there is life given to each and every being also means one s acceptance of this law of progress and de cay We as humans are bound to grow just as we re bound to shrink into old age Although we cannot change this supernatural law of the universe we can in many cases choose how fast we progress or decay We can use our rational human brain towards the consistent progression of ourselves our community and our world We can do this through sustained faith and steady discipline In turn this decreases the decaying rate On the other hand through the coddled comfort of selfishness and endless pity we can do just the opposite and plateau our progress while accelerating our rate of decay One of the main reasons I like Biohacking is because of its communal camaraderie continually focusing on progress In fact many famed biohackers discovered and healed themselves through biohacking after finding themselves in a deathly sick cycle of decay and depression Biohacking when used safely conservatively and respectfully can help us determine what it is that we need to progress in how we can do it as well as how we can measure it and why we should progress and become the best version of ourselves We as individuals families and communities can learn a lot through our experiences with decay and use these dark fragments to build a brighter picture of progress overall And while history may indeed repeat itself as it continually proves we as individuals have the power to choose our rate of progression and decay Choose wisely
