

Upper Atmosphere

The Earth's atmosphere has four primary layers: the troposphere, stratosphere, mesosphere, and thermosphere. These layers protect our planet by absorbing harmful radiation.

Aeronomy of Ice in the Mesosphere (AIM)

AIM's primary focus is the Mesosphere (50-85 miles) and nearby lower nightglow clouds in the mesosphere. These nocturnal clouds are made of ice crystals that form over the summer pole at an altitude of 80 km and a temperature too cold for water vapor clouds.

Ionosphere

The ionosphere is a layer of plasma formed by the ionization of atomic oxygen and nitrogen by highly energetic ultraviolet and X-ray solar radiation. The ionosphere extends from the bottom of the atmosphere up to the magnetosphere. This layer varies daily in the daytime compared to solar radiation causes the ionization of the atoms, but can extend down as far as the mesosphere. However, these upper atmospheric layers are still mostly neutral, with only one in a million particles becoming charged daily. At night, the ionosphere usually collapses in the dark, but still contains ionized atoms caused by cosmic radiation.

Balloons, Balloons, and Satellites

AIM scientists use balloons to collect in-situ measurements in the atmosphere. However, the mesosphere and thermosphere are too high for balloons to reach, so scientists use instruments on sounding balloons and satellites to gather more detailed measurements of the upper atmosphere.

Communication

A unique property of the ionosphere is that it can reflect short-wave radio waves, enabling communication over great distances by "bouncing" signals off the actual atmosphere layer. Variability of the ionosphere can interrupt satellite communication, such as errors in GPS signals for commercial air navigation. During solar storms, this layer can even shut down communication between ground stations and satellites.

Nocturnal Clouds in the Mesosphere

Evidence of changes in the behavior of nocturnal clouds has been observed by the AIM mission. Recent data show dramatically less ice ice content, leading scientists to speculate about changes in weather conditions and pole-to-pole atmospheric circulation.

BARREL

The Ballot Army for Radiation-Induced Relativistic Electron Losses (BARREL) is a balloon-based mission to measure the measurements of NASA's STEP spacecraft. BARREL seeks to measure the precipitation of relativistic electrons from the ionosphere belts during two multi-balloon campaigns operated in the Southern Hemisphere.
