Value Space:

Interactive Multiple Goal Programming J. Spronk, 2012-12-06 1 1 Motivation This book is based on the view that both public and private decision making in practice can often be improved upon by means of formal nonnative decision models and methods To some extent the validity of this statement can be measured by the impressive number of successes of disciplines as operations research and management science However as witnessed by the many discussions in the professional journals in these fields many models and methods do not completely meet the requirements of decision making in practice Of all possible origins of these clear shortcomings we mainly focus on only one the fact that most of these models and methods are unsuitable for decision situations in which multiple and possibly conflicting objectives play a role because they are concentrated on the optimal fulfillment of only one objective The need to account for multiple goals was observed relatively early Hoffman 1955 while describing what seem to be the principal areas in linear programming where new ideas and new methods are needed gives an example with conflicting goals In this problem the assignment of relative weights is a great problem for the planning staff and is probably not the province of the mathematician engaged in solving this problem These remarks were true precursors of later developments Nevertheless the need for methods dealing with multiple goals was not widely recognized until much later
