Tutorial, Recent Advances in Distributed Data Base Management C. Mohan, 1984 **High Performance Transaction Systems** Dieter Gawlick, Mark Haynie, 1989-04-26 This Lecture Notes volume is based on the International Workshop on High Performance Transaction Systems held in the Asilomar Conference Center September 28-30 1987. Many of the problems identified during the workshop are liable to determine the future development of transaction systems and distributed high performance systems in general for many years to come. So the organizers of HPTS 87 felt encouraged to collect the papers presented at the workshop in order to make them accessible to a wider audience of interested developers and researchers. Since some of the contributions represented work in progress the authors agreed to prepare revised and updated versions of their papers for this publication. This accounts for the long delay between the event itself and the publication but on the other hand it provides the reader with a state of the art account of transaction processing topics. The book is organized according to the major sections of the workshop. In the network section the reader finds an analysis of two of the major paradigms in networking ISO/OSI and SNA from the perspective of transaction processing. In the next section four different transaction processing and database systems are described: Model 204 a database management system marketed by Computer Corporation of America; Tandem's NonStop SQL; Citicorp's transaction processing system and ALCS which basically is a version of TPF running under MVS/XTA. The section on architectural issues contains four very different contributions which are fairly representative of the type of problems in transaction systems investigated in the research community. Finally performance evaluations and system comparisons are presented.

Distributed Systems: Distributed data base systems Wesley W. Chu, 1986 *Database Systems* Peter Rob, Carlos Coronel, 1993 A textbook that blends theory and practice for students of database design. Part 1 offers six detailed chapters on database design concepts. Part 2 presents a detailed real world design case in which the concepts of Part 1 are applied. In addition to database administration Part 3 covers three other advanced current database topics: transaction management, distributed databases and object orientation including discussion of the object orientation and the extended relational database. Annotation copyright by Book News Inc, Portland, OR.

Database Design Fundamentals Naphtali Rishe, 1988 **New Directions for Database Systems** Gad Ariav, James Clifford, 1986 This volume is intended for researchers, practitioners and members of the business community interested in the shape of data management in the years to come.
