Ssr 97 Symposium On Software Reusability Software Engineering Notes:

Proceedings of the 1997 Symposium on Software Reusability Association for Computing Machinery, 1997 *Software Architecture* Patrick Donohoe, 2013-06-05 Software architecture is a primary factor in the creation and evolution of virtually all products involving software. It is a topic of major interest in the research community where numerous formalisms, processes, and technologies are under development. Architecture is also of major interest in industry because it is recognized as a significant leverage point for manipulating such basic development factors as cost, quality, and interval. Its importance is attested to by the fact that there are several international workshop series as well as major conference sessions devoted to it. The First Working IFIP Conference on Software Architecture WICSAI provided a focused and dedicated forum for the international software architecture community to unify and coordinate its effort to advance the state of practice and research. WICSA 1 was organized to facilitate information exchange between practicing software architects and software architecture researchers. The conference was held in San Antonio, Texas, USA, from February 22nd to February 24th, 1999. It was the initiating event for the new IFIP TC 2 Working Group on Software Architecture. This proceedings document contains the papers accepted for the conference. The papers in this volume comprise both experience reports and technical papers. The proceedings reflect the structure of the conference and are divided into six sections corresponding to the working groups established for the conference.

Product Focused Software Process Improvement Frank Bomarius, Seija Komi-Sirviö, 2003-06-30 The Third International Conference on Product Focused Software Process Improvement PROFES 2001 continued the success of the PROFES 99 and PROFES 2000 conferences. PROFES 2001 was organized in Kaiserslautern, Germany, September 10-13, 2001. The PROFES conference has its roots in the PROFES Esprit project (<http://www.ele.vtt.fi/profes>) but it quickly evolved into a full-fledged general purpose conference in 1999 and since then it has gained wide spread international popularity. As in previous years, the main theme of PROFES 2001 was professional software process improvement (SPI) motivated by product and service quality needs. SPI is facilitated by software process assessment, software measurement, process modeling, and technology transfer and has become a practical tool for quality software engineering and management. The conference addresses both the solutions found in practice as well as relevant research results from academia. The purpose of the conference is to bring to light the most recent findings and results in the area and to stimulate discussion between the researchers, experienced professionals, and technology providers for SPI.
