*Métodos de resolución de problemas: Aplicación al diseño de sistemas inteligentes* Martin Molina, 2006-09-01 Desde que en 1982 Allen Newell public su artículo que sentaba las bases de la necesidad un nivel adicional para análisis y descripción del conocimiento de sistemas inteligentes se han sucedido avances importantes en la forma de concebir y diseñar este tipo de sistemas Dos aspectos destacan entre los resultados más interesantes de la investigación en la década de los 90 en el campo de la ingeniería del conocimiento Por un lado se ha profundizado en el conocimiento sobre cómo las personas resuelven problemas Esto se ha logrado por la vía empírica mediante un trabajo científico de observación experimental por medios computacionales y generalización Por otro lado como logro adicional en este campo de investigación se ha creado un nuevo lenguaje descriptivo como complemento a las formas de representación tradicionales Dicho lenguaje que ha sido aceptado por un amplio número de autores se sitúa en un mayor nivel de abstracción y permite la formulación de arquitecturas más complejas de sistemas basados en el conocimiento El propósito principal del presente texto es servir de base como fuente de información de ambos aspectos recientes del campo de la ingeniería del conocimiento El texto está dirigido a profesionales y estudiantes del campo de la informática que conocen técnicas básicas tradicionales de representación del conocimiento La redacción del presente texto se ha orientado en primer lugar para recopilar y uniformizar la descripción de métodos existentes en la literatura de ingeniería del conocimiento Se ha elegido un conjunto de métodos representativo en este campo que no cubre la totalidad de los métodos existentes pero sí los más conocidos y utilizados en ingeniería del conocimiento presentando una descripción detallada de carácter tanto teórico como práctico El texto describe cada método utilizando una notación común a todos ellos parcialmente basada en los estándares descriptivos seguidos por las metodologías más extendidas Para cada método se incluyen algoritmos definidos de forma expresa para el presente texto con ejemplos detallados de operación Ambos aspectos la uniformización junto a la presentación detallada de la operación suponen una novedad interesante respecto al estado actual de la literatura sobre este campo lo que hace el texto muy adecuado para ser utilizado como libro de consulta como apoyo en la docencia de la asignatura de construcción de sistemas inteligentes

*La responsabilidad civil derivada de los daños causados por sistemas inteligentes y su aseguramiento. Análisis del tratamiento ofrecido por la Unión Europea* Manuel Ortiz Fernández, 2021-10-19 La irrupción de las nuevas tecnologías y en concreto de la denominada inteligencia artificial es un hecho contrastable A nadie se escapa que en la actualidad la implementación de sistemas que incorporan estas redes neuronales ha aumentado exponencialmente Este desarrollo se debe a la búsqueda de máquinas inteligentes y autónomas que puedan llevar a cabo tareas que en principio estaban reservadas a los seres humanos En este marco debemos pues afrontar las diversas problemáticas derivadas del uso de la inteligencia artificial tratando de ofrecer la respuesta que se presente como más correcta por acoger al mayor número de intereses en juego En este sentido el desarrollo de esta tecnología en múltiples sectores provoca que nos preguntemos si dichos riesgos están cubiertos por un eventual seguro de

responsabilidad o si por el contrario requieren de la suscripción de una modalidad especial Asimismo es particularmente complicado concluir quien es el sujeto responsable lo que dificulta más si cabe la anterior tarea Igualmente debemos reflexionar sobre otras problemáticas íntimamente ligadas a saber los criterios de imputación el recurso a posibles teorías que suavicen el onus probandi la causalidad etc De esta forma pese al ámbito de aplicación de la Directiva sobre responsabilidad por productos defectuosos el marco jurídico vigente no basta para cubrir los daños causados por la nueva generación de robots Para ofrecer respuesta a estas cuestiones se hace necesario analizar los documentos y resoluciones emitidas por las instituciones europeas y sus organismos de apoyo con el fin de buscar criterios que nos permitan dilucidar las particularidades aplicables a este campo En particular cabe destacar la Resolución del Parlamento Europeo de 20 de octubre de 2020 la Propuesta de reglamento sobre responsabilidad civil en materia de inteligencia artificial así como la Propuesta de reglamento del Parlamento Europeo y del Consejo de 21 de abril de 2021 por el que se establecen normas armonizadas de inteligencia artificial artificial intelligence act En definitiva trataremos de extraer los principios reglas o valores establecidos por la Unión Europea en esta materia El Dr Manuel Ortiz Fernández es graduado en Derecho por la Universidad Miguel Hernández de Elche donde le fueron concedidos diversos premios y ayudas como el Premio Extraordinario de la Universidad Miguel Hernández de Elche y la Beca para la promoción de la Excelencia de la Consellería Tras ello cursó el Máster en Derecho de Daños de la Universidad de Alicante obteniendo también el Premio Extraordinario de la Universidad de Alicante Desde el año 2018 es Profesor Ayudante de Derecho Civil de la Universidad Miguel Hernández de Elche En septiembre de 2020 defendió la tesis doctoral titulada Configuración actual del consentimiento informado en el ámbito sanitario la lex artis y los derechos constitucionales presupuestos de la responsabilidad civil ante su vulneración que gracias a realización de una estancia de investigación obtuvo la mención de Doctorado Internacional Además en abril de 2021 fue nombrado coordinador de rea de Convenios de Investigación del Vicerrectorado de Investigación cargo que desempeña en la actualidad Reconocimiento de patrones en imágenes médicas basado en sistemas inteligentes Enrique P. Calot, Fundamentos de inteligencia artificial Luis Álvarez Munárriz, 1994-10 *Control automático aplicado* Quintero, Chistrian, Oñate, José, Jimenez, Jamer, 2017-12-27 Esta nueva edición se constituye en una herramienta complementaria para cursos de Control Automático que aborden técnicas de control clásicas y avanzadas pues mediante una serie de ejercicios facilita la aplicación de conceptos y técnicas para el diseño análisis selección e implementación de sistemas de control análogos y diseño de sistemas lineales de control modelado matemático diagramas de bloques funciones de transferencia representación en el espacio de estados análisis de la respuesta transitoria y estacionaria estabilidad criterio de Routh método del lugar de las raíces análisis de la respuesta en frecuencia diseño de controladores y compensadores control en cascada control anticipativo control difuso control adaptativo control multivariable y sistemas de control digital Además el desarrollo de las prácticas de laboratorio permitirán a los estudiantes afianzar sus conocimientos en el manejo de las herramientas computacionales Matlab y Simulink Sistemas inteligentes de
