Analysis, 1986 **European Security** Bjørn Møller, 2016-04-22 Europe has undergone quite profound changes since the end of the Cold War. Having been a highly militarised conflict ridden and war ridden region the core of Europe today constitutes a security community where armed conflicts among the constituent states has become inconceivable. This comprehensive book offers a theoretically founded and thoroughly documented analysis of European security with a special emphasis on the role played by the United Nations and the various regional and sub regional organisations especially the North Atlantic Treaty Organisation, the Organisation for Security and Cooperation in Europe, the Council of Europe and the European Union. When it comes to explaining peace in Europe opinions differ widely. Some argue that it was only because the West refused to give in to Soviet threats that the latter eventually gave up or that the long peace in Europe was due to the combination of a bipolar alliance structure pitting the North Atlantic Treaty Organisation (NATO) against the Warsaw Pact with the presence of nuclear weapons on both sides. Others point instead to the extraordinarily dense network of international institutions and organisations in Europe offering a wide panoply of fora in which to handle disputes peacefully or to the web of interdependence in economic and other affairs tying together all states in Europe in relations which militate strongly against war. Still others believe that the external peace between the states in Europe is simply a reflection of a convergence of cultures, democracies with marked economies that are open towards the world market. These questions are the focal point of this book which concentrates on security albeit not in the sense of being a treatise on military matters but security obtainable by much more indirect and non military means. It will be required reading for all students and scholars of European security and the organisations which underpin it. *Reader's Guide to Military History* Charles Messenger, 2013-10-31 This book contains some 600 entries on a range of topics from ancient Chinese warfare to late 20th century intervention operations. Designed for a wide variety of users it encompasses general reviews of aspects of military organization and science as well as specific wars and conflicts. The book examines naval and air warfare as well as significant individuals including commanders, theorists and war leaders. Each entry includes a listing of additional publications on the topic accompanied by an article discussing these publications with reference to their particular emphases, strengths and limitations. **Security Studies for the 1990s** Richard H. Shultz, Roy Godson, Ted Greenwood, 1993 The United States is grappling with a new security framework to replace the structure of the Cold War era. American policymakers face a host of challenges including regional conflicts, ethnic tensions and weapons proliferation that commanded little attention in the past. And tomorrow is likely to bring new concerns barely on today's horizon. Despite these changes the study of national security remains largely a creature of the Cold War. The security studies discipline needs to be overhauled. But how should it be revised so that tomorrow's citizens and experts are equipped to understand and help manage new challenges? One option is to downgrade security studies and divert educational resources elsewhere. Another is to redefine the subject to include the study of an all encompassing list of international problems. The third choice is to retain basic definitions, concepts and

subjects while also making significant adjustments Security Studies for the 1990s addresses all three options This book is the first to reexamine security studies in the post Cold War era Scholars and directors from leading security studies programs representing a cross section of viewpoints on foreign affairs discuss what new material needs to be taught and which courses and concepts should be recast Each chapter provides an indepth review of a major security studies course proposing needed changes and a model syllabus Subjects include intelligence policy global environmental problems the causes and termination of wars and collective security A chapter on the teaching of ethics a subject often neglected in the past is also featured

Resolving the Security Dilemma in Europe Bjørn Møller,1991 For the first time since the beginning of the Cold War more than 40 years ago the political determinants of military security in Europe are changing much more quickly than the technological ones Non offensive defence is now a more acceptable strategy than it was before and this book points towards realistic solutions to the problems of excessive dependence on nuclear weapons and or self defeating offensive force structures The ideas examined are especially important for British and American audiences since the Anglo Saxon countries are the ones most wedded to NATO orthodoxy and therefore the slowest to react to the current wave of change
