**Biological Anthropology and Aging** Douglas E. Crews,Ralph M. Garruto,1994 This timely volume explores evolutionary cross cultural physiological environmental and pathological influences on variation in human biological aging Chapters by leading experts use models traditionally unique to anthropological research in order to illuminate human biological aging as a heterogeneous and variable process By explicitly emphasizing evolutionary biology and human variation the book presents the fascinating perspective of human biological aging as the end result of a set of co adapted genetic complexes associated with successful growth development reproduction and parenting of offspring While examining human life span and life history parameters as population level phenomena the book also emphasizes human phenotypic plasticity as key to understanding aging This broad evolutionary perspective is unique in biological gerontology a field that is often reductionist in method and theory The book is sure to appeal to students teachers and researchers of geriatrics gerontology biology and anthropology of aging and human population biology Strategies for Engineered Negligible Senescence International Association of Biomedical Gerontology. International Congress,2004 This volume focuses squarely on the fact that as a result of a wide range of advances over recent years increasingly many specialists in the biology of aging are revising their traditional view that mammalian aging will remain essentially immutable for many decades to come This is exemplified by three carefully argued analyses of the current state of biomedical gerontology published recently by a variety of experts in fields spanning most major aspects of mammalian aging We are therefore at an unprecedented turning point in the study of aging in which the curiosity driven exploratory research that has justifiably monopolized the field until now can at last be legitimately accompanied by goal directed biotechnological efforts rationally designed on the basis of solid scientific knowledge The purpose of this volume is to consolidate that advance by making those at the forefront of each aspect of aging and its control more aware of each other s work and by drawing attention to the comprehensiveness and therefore the potential efficacy of foreseeable anti aging biotechnology
