Computed Radiography Yukio Tateno, Takeshi Inuma, Masao Takano, 2012-12-06 Computed radiography is one of the most promising digital radiography techniques and is expected to replace the conventional screen film radiography in the near future This book is the first textbook on computed radiography written by Japanese authors and describes basic technologies and clinical results obtained at various hospitals There are more than 60 CR systems working in clinical environments in Japan However as yet there are not so many systems working outside Japan This book is therefore a good introduction to the new technology and practice of the CR system all over the world

Expectations and Actions Norman T. Feather, 2021-12-29 Originally published in 1982 this book examines the current status of expectancy value models in psychology The focus is upon cognitive models that relate action to the perceived attractiveness or aversiveness of expected consequences A person's behavior is seen to bear some relation to the expectations the person holds and the subjective value of the consequences that might occur following the action Despite widespread interest in the expectancy value valence approach at the time there was no book that looked at its current status and discussed its strengths and its weaknesses using contributions from some of the theorists who were involved in its original and subsequent development and from others who were influenced by it or had cause to examine the approach closely This book was planned to meet this need The chapters in this book relate to such areas as achievement motivation attribution theory information feedback organizational psychology the psychology of values and attitudes and decision theory and in some cases they advance the expectancy value approach further and in other cases point to some of its deficiencies

Permuted Medical Subject Headings National Library of Medicine (U.S.), 1993 Catheter-Based Cardiovascular Interventions Peter Lanzer, 2012-08-01 Operator skills and in particular decision making and strategic skills are the most critical factor for the outcome of catheter based cardiovascular interventions Currently such skills are commonly developed by the empirical trial and error method only In this textbook for the first time an explicit teaching training and learning approach is set out that will enable interventional operators whether cardiologists vascular surgeons vascular specialists or radiologists to learn about and to develop the cognitive skills required in order to achieve consistent expert level catheter based interventions It is anticipated that adoption of this approach will allow catheter based interventions to become a domain of excellence with rapid transfer of knowledge steep learning curves and highly efficient
